

PROJECT 5

In mid-2015, Pair Networks disabled support for server-side includes (SSI) in the basic accounts that are provided free of charge to Against The Clock users. Although the SSI exercise in the project works as described, you will not be able to see the included page if you upload it to a basic Pairservers account.

If you decide to use SSI in a live site, consult with your server host company to be sure:

- a) the technology is supported on your server; and
- b) exactly what type of setup is required by your server company to support SSI
